EDUCATION

United University Prayagraj, Uttar Pradesh
Bachelor of Technology in Computer Science & Engineering — 2022 – 2026

Seth M. R. Jaipuria School Varanasi, Uttar Pradesh
Senior Secondary — 2021 – 2022

TECHNICAL SKILLS

Cyber Security: Network Security, Security Operations (SOC), Vulnerability Assessment, Threat Detection, Incident Response Fundamentals, Risk Assessment, Security Monitoring, Network Reconnaissance, OSINT, OWASP Top 10
Networking: TCP/IP, UDP, DNS, DHCP, ARP, ICMP, HTTP/HTTPS, SSH, FTP, OSI Model, Routing & Switching, Subnetting
Security Tools: Nmap, Wireshark, Burp Suite, Kali Linux
Programming: Python, SQL, JavaScript, Bash
Frameworks: FastAPI, REST APIs, Docker
Databases: PostgreSQL, MySQL
Operating Systems: Linux, Windows

PROJECTS

Vulnerability Scanner 2026
Python, FastAPI, PostgreSQL, Docker

- Conducted automated network assessments to identify open ports, analyse service banners and software versions, and detect exposed or potentially vulnerable services.
- Correlated identified services with publicly disclosed CVEs and prioritised findings using CVSS severity scores to support risk assessment.
- Generated structured PDF, CSV, and JSON security reports to document findings and assist vulnerability remediation.

TCP Port Scanner 2025
Python

- Conducted TCP port scanning to identify exposed network services and evaluate the attack surface of target systems.
- Performed service discovery to support network enumeration and assist in identifying potentially accessible entry points.
- Produced structured scan reports that facilitated further vulnerability assessment and security analysis.

CYBERSECURITY LAB EXPERIENCE

Platform: TryHackMe

- Practised hands-on labs and rooms on TryHackMe covering network reconnaissance using OSINT, WHOIS, and DNS enumeration; analysed traffic and TCP/IP communication using Wireshark.
- Practised vulnerability assessment and web security concepts aligned with OWASP Top 10 in authorised lab environments.
- Explored Linux networking utilities and security tools for network diagnostics, packet analysis, and system security assessments.

EXPERIENCE

VKIT Company June 2025 – Aug 2025
Full Stack Website Development Intern

- Developed dynamic web applications, gaining practical experience in client-server architecture, backend development, and database integration.
- Strengthened understanding of secure web application development by learning how authentication, input validation, and database interactions influence application security and help mitigate common web vulnerabilities.

IIIT Allahabad Aug 2023 – Sept 2023
Website Development Intern

- Developed responsive web pages, building a strong foundation in the structure and functionality of modern websites.
- Gained a fundamental understanding of how websites operate, providing groundwork for learning web application security concepts and recognising common web attack surfaces.

CERTIFICATIONS & ACHIEVEMENTS

- Deloitte — Cyber Job Simulation
- IBM SkillsBuild — Level Up Cybersecurity with Generative AI
- Built an independent cybersecurity laboratory using Linux and Windows for practical security experimentation.
- Developed security-focused projects demonstrating vulnerability assessment, network scanning, and Python automation.
